

# Circle of Parents

## North Carolina Statewide Summary

### 2018 Snapshot

#### Overview

The Protective Factors Survey (PFS) was administered by group facilitators during the period of February-April 2018, using a post-test/retrospective pre-test format, providing 674 data sets for analysis. It should be noted that individual data sets met analysis criteria for one or more protective factors, but did not necessarily meet analysis criteria for every protective factor.

#### Findings

Analyses of protective factors suggest an overall positive impact of Circle of Parents, increasing the health and well-being of children and families. Protective factors that have statistically significant results are followed by **(SS)**, meaning analysis resulted in a p-value of 0.0500 or less indicating mathematical confidence that the result is reliable and unlikely to have been produced by chance.

#### Protective Factors

- Family Functioning/Resiliency **(SS)**
- Social Emotional Support **(SS)**
- Concrete Support **(SS)**
- Nurturing and Attachment **(SS)**
- Child Development/Knowledge of Parenting

\*Q12 **(SS)** \*Q14 **(SS)** \*Q16 **(SS)**  
Q13 **(SS)** Q15 **(SS)**

The Child Development/Knowledge of Parenting factor is composed of five unique items that do not necessarily correlate. Because of the nature of these items, the PFS authors recommend calculation at the individual item level rather than a subscale score.

*\*Note: Positive impact is indicated by a lower "NOW" score for items Q12, Q14, and Q16.*

#### Family Functioning/Resiliency

#### Social Emotional Support

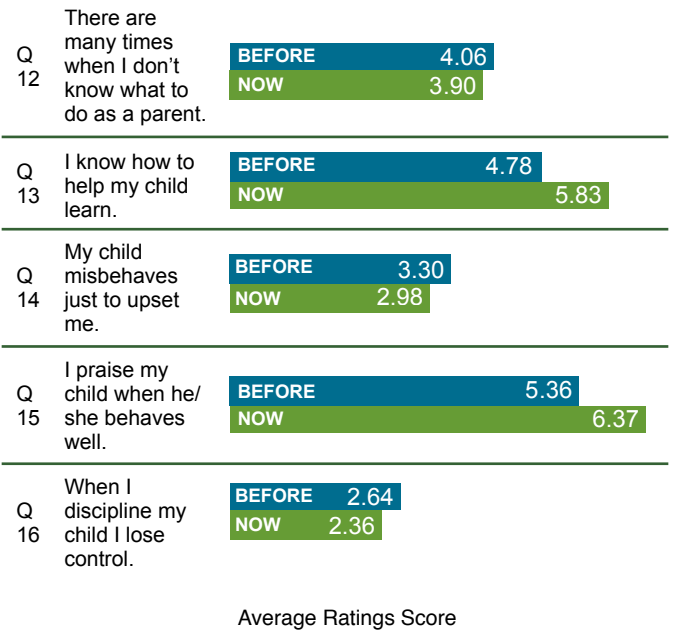

#### Concrete Support

#### Nurturing and Attachment

#### Child Development/Knowledge of Parenting
